PENLOOP MACHINE

Italian design and TOP  
performance for a  
unique machine

## HOW IT WORKS

Pen loop Insertion Machine is a special equipment that can apply the elastic as pen loop to the side of the unfinished agenda covers. This kind of application if it is not made by our system is usually made stopping the elastic with a piece of metal. The old design can compromise the quality so the new request is for a solution that permit to get a strong pen loop without metal insert and a clean surface. The system works adding 2 points thus increasing pull resistance.

## TECHNICAL DETAILS

### DESCRIPTION

Up to 500 covers per hour  
Simple semi automatic set up  
Minimum Size from 105 X 110 mm  
Max Size from 320 X 430 mm  
Cover thickness from 1 to 5 mm
