## PCC01

ROUND CORNER CUTTING

## PCC01 CORNER CUTTER

The PCC01 is a simple and efficient corner cutter: it is equipped with two cutting devices, so that it is possible to cut two corners of cover materials at the same time. The adjustment of the machine for the various sizes is done manually and very quickly by means of a hand-wheel and one locking lever. The cut depth (the size of the triangular trim) can be adjusted by moving the sides guides.

PCC01 is the ideal corner cutter solution for the cover preparation, for the book block angle round corners, for the integral case covers preparation. All can be done in the same machine as single product or as a pile.

Contact us for a test or learn more.

## PCC01 CORNER CUTTER

Up to 700 cycles possible per hour

Simple semi automatic set up

Useful for cut cover material

Useful for cut book block

Useful for cut cover with integral shape
