H02
SEMI AUTOMATIC HEAD TAIL BAND

MACHINES AVAILABLE

A feature of the Head Tail Band is the compact dimension and nice design. The operator can adjust it under the material of books in production in totally safety. As well we are talking about a semiautomatic equipment, HO2 is the fastest off line machine existing in the market right now. With over 600 machines installed all over the world it represent a certain for our end user.

GREAT PERFORMANCE

HEAD TAIL BAND

The Head Tail Band is a flexible and compact unit for the application of head and tail band on round and square book blocks in one time by two heads symultanesly. The head/tail band is joined to the glue strip before being applied to the book spine on booth sides. There is different ways to produce an hard cover book: it can be handmade in a semiautomatic system using more operators or with totally automatic machines. The choice depends, first of all, from the quality wanted for the finished book: all the machines produced by us are the result of the knowhow assimilated in decades of experience in this sector. The second essential guideline to be considered is the production speed, so the automation level required. HO2 match perfectly the point of speed and operation cost for a great result.

Technical details

- Up to 700 books per hour
- Simply operation with semiautomatic set up
- Binding minimum Size from 100 X 100 mm
- Binding max Size from 420 X 320 mm
- Spine thickness from 6 to 80 mm
- Automatic cutting
- Double Safety cutting System
